

DO YOU WORK WITH GENOME-MAPPED DATA?

JOIN THE CONVERSATION!

We'd like to invite 3–4 researchers who have **visualized genome-mapped data** as part of their workflow to join a 30-min conversation for a **user study**. During our chat, you'll try out our newly developed search engine for genomics visualizations and share your feedback.

Why? Our Goal:

To provide a **search engine** that enables researchers to efficiently find visualizations and adapt them as customizable templates for their own projects.

A tool built by biomedical informatics researchers, for biomedical informatics researchers.

🔗 [About the study:](#)

How? Get Involved!

Your feedback matters!

Let's chat in person or via Zoom about your experience with the tool, and how we can make it more useful for *you*.

Who can participate?

We welcome graduate students, postdocs, faculty, bioinformatics researchers, clinicians, software engineers with experience in genomics and data visualization.
